

1. **What is the difference between structured and unstructured output?** Explain with suitable examples.
2. **Why is structured output important when working with Large Language Models (LLMs)?** Mention some real-world use cases where structured output is necessary.
3. **What are the different ways to obtain structured output from an LLM?** Explain how formatting instructions and schemas help achieve this.
4. **What is `TypedDict` in Python, and how can it be used to define the expected structure of an LLM's output?**
5. **Why is it important to format and validate the output generated by an LLM?** What problems can occur if the output does not follow the expected structure?
