

1. What is structured output, and why is it important when working with Large Language Models?
2. How does `with_structured_output()` help convert an LLM's free-form response into a predictable format?
3. What is TypedDict in Python, and how can it be used to define a schema for structured output?
4. What is Pydantic, and how is it different from a regular Python dictionary or TypedDict?
5. What is the role of data validation in Pydantic, and how can Pydantic convert and validate incoming data?
