

1. What is a LangChain Chain, and how is it different from executing each component manually?
2. What is the role of the pipe operator (|) in LangChain? Explain how data flows through a chain.
3. What is a Sequential Chain? Explain how the output of one step can become the input of the next step.
4. In a chain such as PromptTemplate → Chat Model → StrOutputParser, what does each component do?
5. Why might we use multiple prompts and model calls in a single chain? Explain using an example where a detailed output is converted into a concise summary.
